## CLAIMS

1. An enterprise evaluation device, comprising:

5

10

15

20

25

gazette acquisition means for acquiring registration gazettes based on patent applications filed by a specified enterprise within a specified period from a database;

number-of-inventions acquisition means for acquiring the number of patents subjected to, before a predetermined time, registration or number of claims of the patents as the number of inventions from said acquired registration gazettes;

number-of-extinguished-inventions acquisition means for acquiring the number of extinguished inventions of patents extinguished before the predetermined time among said acquired number of inventions;

total number-of-effective-patents calculation means for calculating the total number of effective patents by subtracting the number of extinguished inventions from said acquired number of inventions;

total effective patent remaining ratio calculation means for calculating the total effective patent remaining ratio through dividing said calculated total number of effective patents by said number of inventions; and

output means for outputting said calculated total effective patent remaining ratio to display means, printing means, recording medium, or another telecommunications device via a communication line.

5

10

15

20

25

gazette acquisition means for acquiring registration gazettes based on patent applications filed by a specified enterprise within a specified period from a database;

number of inventions per applicant acquisition means for acquiring the number of patents subjected to, before a predetermined time, registration or number of claims of the patents as the number of registered inventions from each of said acquired registration gazettes, acquiring the number of applicants described in each of said acquired gazettes, and acquiring the number of registered inventions per unit of applicant through dividing said acquired number of registered inventions by the number of applicants;

number of registered inventions acquisition means for counting said acquired number of registered inventions per unit of applicant for said all acquired gazettes and acquiring the total number of registered inventions as the number of inventions;

number-of-extinguished-inventions acquisition means for acquiring the number of extinguished inventions of patents extinguished before the predetermined time among said acquired number of inventions;

total number-of-effective-patents calculation means for calculating the total number of effective patents by subtracting the number of extinguished inventions from said

acquired number of inventions;

total effective patent remaining ratio calculation means for calculating the total effective patent remaining ratio through dividing said calculated total number of effective patents by said number of inventions; and

output means for outputting said calculated total effective patent remaining ratio to display means, printing means, recording medium, or another telecommunications device via a communication line.

10

15

20

25

5

3. An enterprise evaluation device, comprising:

gazette acquisition means for acquiring registration gazettes based on patent applications in a predetermined technical field filed within a specified period by a specified enterprise from a database;

number-of-inventions acquisition means for acquiring the number of patents subjected to, before a predetermined time, registration or number of claims of the patents as the number of inventions from said acquired registration gazettes;

number-of-extinguished-inventions acquisition means for acquiring the number of extinguished inventions of patents extinguished before the predetermined time among said acquired number of inventions;

total number-of-effective-patents calculation means for calculating the total number of effective patents by subtracting the number of extinguished inventions from said

acquired number of inventions;

total effective patent remaining ratio calculation means for calculating the total effective patent remaining ratio through dividing said calculated total number of effective patents by said number of inventions; and

output means for outputting said calculated total effective patent remaining ratio to display means, printing means, recording medium, or another telecommunications device via a communication line.

10

15

20

25

5

4. An enterprise evaluation device, comprising:

gazette acquisition means for acquiring registration gazettes based on patent applications in a predetermined technical field filed by a specified enterprise within a specified period from a database;

number of inventions per applicant acquisition means for acquiring the number of patents subjected to, before a predetermined time, registration or number of claims of the patents as the number of registered inventions from each of said acquired registration gazettes, acquiring the number of applicants described in each of said acquired gazettes, and acquiring the number of registered inventions per unit of applicant through dividing said acquired number of registered inventions by the number of applicants;

number of registered inventions acquisition means for counting said acquired number of registered inventions per

unit of applicant for said all acquired gazettes and acquiring the total number of registered inventions as the number of inventions;

number-of-extinguished-inventions acquisition means for acquiring the number of extinguished inventions of patents extinguished before the predetermined time among said acquired number of inventions;

total number-of-effective-patents calculation means for calculating the total number of effective patents by subtracting the number of extinguished inventions from said acquired number of inventions;

total effective patent remaining ratio calculation means for calculating the total effective patent remaining ratio through dividing said calculated total number of effective patents by said number of inventions; and

output means for outputting said calculated total effective patent remaining ratio to display means, printing means, recording medium, or another telecommunications device via a communication line.

20

25

5

10

15

5. An enterprise evaluation device, comprising:

gazette acquisition means for acquiring registration gazettes for patents surviving up to a predetermined time among the patent applications filed by a specified enterprise within a specified period from a database;

remaining period calculation means for calculating a term

expiration date of each of rights of said acquired registration gazettes, and calculating the remaining period by subtracting the predetermined time from said term expiration date;

patent stock index calculation means for calculating a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time; and

output means for outputting said calculated patent stock

10 index to display means, printing means, recording medium, or
another telecommunications device via a communication line.

6. An enterprise evaluation device, comprising:

15

20

25

gazette acquisition means for acquiring registration gazettes for patents surviving up to a predetermined time among the patent applications filed by a specified enterprise within a specified period from a database;

remaining period per applicant calculation means for calculating a term expiration date of each of rights of said acquired registration gazettes, calculating a remaining period by subtracting the predetermined time from said term expiration date, acquiring the number of applicants described in each of said acquired gazettes, and calculating the remaining period per unit of applicant through dividing said remaining period by the number of applicants;

patent stock index calculation means for calculating a

patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time; and

output means for outputting said calculated patent stock

index to display means, printing means, recording medium, or

another telecommunications device via a communication line.

7. An enterprise evaluation device, comprising:

10

15

20

25

gazette acquisition means for acquiring registration gazettes for patents surviving up to a predetermined time among the patent applications in a predetermined technical field filed by a specified enterprise within a specified period from a database;

remaining period calculation means for calculating a term expiration date of each of rights of said acquired registration gazettes, and calculating the remaining period by subtracting the predetermined time from said term expiration date;

patent stock index calculation means for calculating a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time; and

output means for outputting said calculated patent stock index to display means, printing means, recording medium, or another telecommunications device via a communication line.

5

10

15

20

25

gazette acquisition means for acquiring registration gazettes for patents surviving up to a predetermined time among the patent applications in a predetermined technical field filed by a specified enterprise within a specified period from a database;

remaining period per applicant calculation means for calculating a term expiration date of each of rights of said acquired registration gazettes, calculating a remaining period by subtracting the predetermined time from said term expiration date, acquiring the number of applicants described in each of said acquired gazettes, and calculating the remaining period per unit of applicant through dividing said remaining period by the number of applicants;

patent stock index calculation means for calculating a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time; and

output means for outputting said calculated patent stock index to display means, printing means, recording medium, or another telecommunications device via a communication line.

9. An enterprise evaluation device, comprising:

gazette acquisition means for acquiring registration gazettes for patents surviving up to a predetermined time among the patent applications filed by a specified enterprise

within a specified period from a database;

remaining period calculation means for calculating a term expiration date of each of rights of said acquired registration gazettes, and calculating the remaining period by subtracting the predetermined time from said term expiration date;

patent stock index calculation means for calculating a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time, and dividing the same by the average number of days of one year or one month; and

output means for outputting said calculated patent stock index to display means, printing means, recording medium, or another telecommunications device via a communication line.

15

20

25

10

10. An enterprise evaluation device, comprising:

gazette acquisition means for acquiring registration gazettes for patents surviving up to a predetermined time among the patent applications filed by a specified enterprise within a specified period from a database;

remaining period per applicant calculation means for calculating a term expiration date of each of rights of said acquired registration gazettes, calculating a remaining period by subtracting the predetermined time from said term expiration date, acquiring the number of applicants described in each of said acquired gazettes, and calculating the

remaining period per unit of applicant through dividing said remaining period by the number of applicants;

patent stock index calculation means for calculating a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time and dividing the same by the average number of days of one year or one month; and

output means for outputting said calculated patent stock index to display means, printing means, recording medium, or another telecommunications device via a communication line.

## 11. An enterprise evaluation device, comprising:

10

15

20

25

gazette acquisition means for acquiring registration gazettes for patents surviving up to a predetermined time among the patent applications in a predetermined technical field filed by a specified enterprise within a specified period from a database;

remaining period calculation means for calculating a term expiration date of each of rights of said acquired registration gazettes, and calculating the remaining period by subtracting the predetermined time from said term expiration date;

patent stock index calculation means for calculating a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time and dividing the same by the average

number of days of one year or one month; and

output means for outputting said calculated patent stock index to display means, printing means, recording medium, or another telecommunications device via a communication line.

5

10

15

20

25

12. An enterprise evaluation device, comprising:

gazette acquisition means for acquiring registration gazettes for patents surviving up to a predetermined time among the patent applications in a predetermined technical field filed by a specified enterprise within a specified period from a database;

remaining period per applicant calculation means for calculating a term expiration date of each of rights of said acquired registration gazettes, calculating a remaining period by subtracting the predetermined time from said term expiration date, acquiring the number of applicants described in each of said acquired gazettes, and calculating the remaining period per unit of applicant through dividing said remaining period by the number of applicants;

patent stock index calculation means for calculating a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time and dividing the same by the average number of days of one year or one month; and

output means for outputting said calculated patent stock index to display means, printing means, recording medium, or

another telecommunications device via a communication line.

13. An enterprise evaluation device, comprising:

5

10

15

20

gazette acquisition means for acquiring registration gazettes for patents surviving up to a predetermined time among the patent applications filed by a specified enterprise within a specified period from a database;

remaining period calculation means for calculating a term expiration date of each of rights of said acquired registration gazettes, and calculating the remaining period by subtracting the predetermined time from said term expiration date;

patent stock index calculation means for calculating a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time;

average remaining period of total effective patents

calculation means for calculating the average remaining period

of total effective patents through dividing said patent stock

index by the number of registration gazettes for patents

surviving up to said predetermined time; and

output means for outputting said calculated average remaining period of total effective patents to display means, printing means, recording medium, or another

25 telecommunications device via a communication line.

5

10

15

20

25

gazette acquisition means for acquiring registration gazettes for patents surviving up to a predetermined time among the patent applications filed by a specified enterprise within a specified period from a database;

remaining period per applicant calculation means for calculating a term expiration date of each of rights of said acquired registration gazettes, calculating a remaining period by subtracting the predetermined time from said term expiration date, acquiring the number of applicants described in each of said acquired gazettes, and calculating the remaining period per unit of applicant through dividing said remaining period by the number of applicants;

patent stock index calculation means for calculating a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time;

average remaining period of total effective patents calculation means for calculating the average remaining period of total effective patents through dividing said patent stock index by the number of registration gazettes for patents surviving up to said predetermined time; and

output means for outputting said calculated average remaining period of total effective patents to display means, printing means, recording medium, or another telecommunications device via a communication line.

5

10

15

20

gazette acquisition means for acquiring registration gazettes for patents surviving up to a predetermined time among the patent applications in a predetermined technical field filed by a specified enterprise within a specified period from a database;

remaining period calculation means for calculating a term expiration date of each of rights of said acquired registration gazettes, and calculating the remaining period by subtracting the predetermined time from said term expiration date;

patent stock index calculation means for calculating a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time;

average remaining period of total effective patents calculation means for calculating the average remaining period of total effective patents through dividing said patent stock index by the number of registration gazettes for patents surviving up to said predetermined time; and

output means for outputting said calculated average remaining period of total effective patents to display means, printing means, recording medium, or another

25 telecommunications device via a communication line.

5

10

15

20

25

gazette acquisition means for acquiring registration gazettes for patents surviving up to a predetermined time among the patent applications in a predetermined technical field filed by a specified enterprise within a specified period from a database;

remaining period per applicant calculation means for calculating a term expiration date of each of rights of said acquired registration gazettes, calculating a remaining period by subtracting the predetermined time from said term expiration date, acquiring the number of applicants described in each of said acquired gazettes, and calculating the remaining period per unit of applicant through dividing said remaining period by the number of applicants;

patent stock index calculation means for calculating a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time;

average remaining period of total effective patents calculation means for calculating the average remaining period of total effective patents through dividing said patent stock index by the number of registration gazettes for patents surviving up to said predetermined time; and

output means for outputting said calculated average remaining period of total effective patents to display means, printing means, recording medium, or another

telecommunications device via a communication line.

17. An enterprise evaluation device, comprising:

10

15

20

25

gazette acquisition means for acquiring registration gazettes for patents surviving up to a predetermined time among the patent applications filed by a specified enterprise within a specified period from a database;

remaining period calculation means for calculating a term expiration date of each of rights of said acquired registration gazettes, and calculating the remaining period by subtracting the predetermined time from said term expiration date;

patent stock index calculation means for calculating a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time;

average remaining period of total effective patents calculation means for calculating the average remaining period of total effective patents through dividing said patent stock index by the number of registration gazettes for patents surviving up to said predetermined time and the average number of days of one year or one month; and

output means for outputting said calculated average remaining period of total effective patents to display means, printing means, recording medium, or another telecommunications device via a communication line.

5

10

15

20

25

gazette acquisition means for acquiring registration gazettes for patents surviving up to a predetermined time among the patent applications filed by a specified enterprise within a specified period from a database;

remaining period per applicant calculation means for calculating a term expiration date of each of rights of said acquired registration gazettes, calculating a remaining period by subtracting the predetermined time from said term expiration date, acquiring the number of applicants described in each of said acquired gazettes, and calculating the remaining period per unit of applicant through dividing said remaining period by the number of applicants;

patent stock index calculation means for calculating a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time;

average remaining period of total effective patents

calculation means for calculating the average remaining period

of total effective patents through dividing said patent stock

index by the number of registration gazettes for patents

surviving up to said predetermined time and the average number

of days of one year or one month; and

output means for outputting said calculated average remaining period of total effective patents to display means,

printing means, recording medium, or another telecommunications device via a communication line.

19. An enterprise evaluation device, comprising:

5

10

15

20

25

gazette acquisition means for acquiring registration gazettes for patents surviving up to a predetermined time among the patent applications in a predetermined technical field filed by a specified enterprise within a specified period from a database;

remaining period calculation means for calculating a term expiration date of each of rights of said acquired registration gazettes, and calculating the remaining period by subtracting the predetermined time from said term expiration date;

patent stock index calculation means for calculating a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time;

average remaining period of total effective patents
calculation means for calculating the average remaining period
of total effective patents through dividing said patent stock
index by the number of registration gazettes for patents
surviving up to said predetermined time and the average number
of days of one year or one month; and

output means for outputting said calculated average remaining period of total effective patents to display means,

printing means, recording medium, or another telecommunications device via a communication line.

20. An enterprise evaluation device, comprising:

5

10

15

20

25

gazette acquisition means for acquiring registration gazettes for patents surviving up to a predetermined time among the patent applications in a predetermined technical field filed by a specified enterprise within a specified period from a database;

remaining period per applicant calculation means for calculating a term expiration date of each of rights of said acquired registration gazettes, calculating a remaining period by subtracting the predetermined time from said term expiration date, acquiring the number of applicants described in each of said acquired gazettes, and calculating the remaining period per unit of applicant through dividing said remaining period by the number of applicants;

patent stock index calculation means for calculating a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time;

average remaining period of total effective patents calculation means for calculating the average remaining period of total effective patents through dividing said patent stock index by the number of registration gazettes for patents surviving up to said predetermined time and the average number

of days of one year or one month; and

5

20

25

output means for outputting said calculated average remaining period of total effective patents to display means, printing means, recording medium, or another telecommunications device via a communication line.

21. The enterprise evaluation device according to any one of claims 1 to 20,

wherein said registration gazettes are gazettes including

10 publications of patent registrations, publications of examined

patent applications, publications of examined utility model

applications or publications of utility model registrations;

and

wherein, when the registered gazettes are utility model

15 gazettes, said patent application refers to a utility model

application, and the patent subjected to registration refers

to a utility model subjected to registration.

22. An enterprise evaluation device, comprising:

gazette acquisition means for acquiring registration gazettes based on patent applications filed by a specified enterprise within a specified period from a database;

number-of-inventions acquisition means for acquiring the number of patents subjected to, before a predetermined time, registration or number of claims of the patents as the number of inventions from said acquired registration gazettes;

number-of-extinguished-inventions acquisition means for acquiring the number of extinguished inventions of patents extinguished before the predetermined time among said acquired number of inventions;

total number-of-effective-patents calculation means for calculating the total number of effective patents by subtracting the number of extinguished inventions from said acquired number of inventions;

display data generation means for generating display data for associating said total number of effective patents and the patent stock index according to any one of claims 5 to 12 for display; and

output means for outputting said display data to display means, printing means, recording medium, or another telecommunications device via a communication line.

## 23. An enterprise evaluation device, comprising:

10

15

20

25

sales volume acquisition means for acquiring a sales volume of a specified enterprise during a predetermined time from a management-finance database recording management-finance information of an enterprise;

display data generation means for generating display data for associating said sales volume and the patent stock index according to any one of claims 5 to 12 for display; and

output means for outputting said display data to display means, printing means, recording medium, or another

telecommunications device via a communication line.

10

15

20

25

24. An enterprise evaluation program to be executed by information processing means of an enterprise evaluation device comprising gazette acquisition means for acquiring registration gazettes from a database, number-of-inventions acquisition means for acquiring the number of inventions from registration gazettes, number-of-extinguished-inventions acquisition means for acquiring the number of extinguished inventions among the number of inventions, total number-ofeffective-patents calculation means for calculating the total number of effective patents, total effective patent remaining ratio calculation means for calculating the total effective patent remaining ratio, output means for outputting the total effective patent remaining ratio to display means or the like, and information processing means capable of controlling said gazette acquisition means, number-of-inventions acquisition means, number-of-extinguished-inventions acquisition means, total number-of-effective-patents calculation means, total effective patent remaining ratio calculation means and output means,

wherein said information processing means achieves:

a function for causing said gazette acquisition means to acquire registration gazettes based on patent applications filed by a specified enterprise within a specified period from a database;

a function for causing said number of inventions acquisition means to acquire the number of patents subjected to, before a predetermined time, registration or number of claims of the patents as the number of inventions from said acquired registration gazettes,

5

10

15

20

25

a function for causing said number-of-extinguishedinventions acquisition means to acquire the number of
extinguished inventions of patents extinguished before the
predetermined time among said acquired number of inventions;

a function for causing said total number-of-effectivepatents calculation means to calculate the total number of effective patents by subtracting the number of extinguished inventions from said acquired number of inventions;

a function for causing said total effective patent remaining ratio calculation means to calculate the total effective patent remaining ratio through dividing said calculated total number of effective patents by said number of inventions; and

a function for causing said output means to output said calculated total effective patent remaining ratio to display means, printing means, recording medium, or another telecommunications device via a communication line.

25. An enterprise evaluation program to be executed by information processing means of an enterprise evaluation device comprising gazette acquisition means for acquiring

registration gazettes from a database, number of inventions per applicant acquisition means for acquiring the number of registered inventions per unit of applicant, number of registered inventions acquisition means for acquiring the number of inventions, number-of-extinguished-inventions acquisition means for acquiring the number of extinguished inventions among the number of inventions, total number-ofeffective-patents calculation means for calculating the total number of effective patents, total effective patent remaining ratio calculation means for calculating the total effective patent remaining ratio, output means for outputting the total effective patent remaining ratio to display means or the like, and information processing means capable of controlling said gazette acquisition means, number of inventions per applicant acquisition means, number of registered inventions acquisition means, number-of-extinguished-inventions acquisition means, total number-of-effective-patents calculation means, total effective patent remaining ratio calculation means and output means,

5

10

15

20

25

wherein said information processing means achieves:

a function for causing said gazette acquisition means to acquire registration gazettes based on patent applications filed by a specified enterprise within a specified period from a database;

a function for causing said number of inventions per applicant acquisition means to acquire the number of patents

subjected to, before a predetermined time, registration or number of claims of the patents as the number of registered inventions from each of said acquired registration gazettes, acquire the number of applicants described in each of said acquired gazettes, and acquire the number of registered inventions per unit of applicant through dividing said acquired number of registered inventions by the number of applicants;

5

15

20

25

a function for causing said number of registered

10 inventions acquisition means to count said acquired number of registered inventions per unit of applicant for said all acquired gazettes and acquiring the total number of registered inventions as the number of inventions;

a function for causing said number-of-extinguishedinventions acquisition means to acquire the number of
extinguished inventions of patents extinguished before the
predetermined time among said acquired number of inventions;

a function for causing said total number-of-effectivepatents calculation means to calculate the total number of effective patents by subtracting the number of extinguished inventions from said acquired number of inventions;

a function for causing said total effective patent remaining ratio calculation means to calculate the total effective patent remaining ratio through dividing said calculated total number of effective patents by said number of inventions; and

a function for causing said output means to output said calculated total effective patent remaining ratio to display means, printing means, recording medium, or another telecommunications device via a communication line.

5

10

15

20

An enterprise evaluation program to be executed by 26. information processing means of an enterprise evaluation device comprising gazette acquisition means for acquiring registration gazettes from a database, number-of-inventions acquisition means for acquiring the number of inventions from registration gazettes, number-of-extinguished-inventions acquisition means for acquiring the number of extinguished inventions among the number of inventions, total number-ofeffective-patents calculation means for calculating the total number of effective patents, total effective patent remaining ratio calculation means for calculating the total effective patent remaining ratio, output means for outputting the total effective patent remaining ratio to display means or the like, and information processing means capable of controlling said gazette acquisition means, number-of-inventions acquisition means, number-of-extinguished-inventions acquisition means, total number-of-effective-patents calculation means, total effective patent remaining ratio calculation means and output means,

25

a function for causing said gazette acquisition means to

wherein said information processing means achieves:

acquire registration gazettes based on patent applications in a predetermined technical field filed within a specified period by a specified enterprise from a database;

a function for causing said number-of-inventions acquisition means to acquire the number of patents subjected to, before a predetermined time, registration or number of claims of the patents as the number of inventions from said acquired registration gazettes;

5

10

15

20

25

a function for causing said number-of-extinguishedinventions acquisition means to acquire the number of
extinguished inventions of patents extinguished before the
predetermined time among said acquired number of inventions;

a function for causing said total number-of-effectivepatents calculation means to calculate the total number of effective patents by subtracting the number of extinguished inventions from said acquired number of inventions;

a function for causing said total effective patent remaining ratio calculation means to calculate the total effective patent remaining ratio through dividing said calculated total number of effective patents by said number of inventions; and

a function for causing said output means to output said calculated total effective patent remaining ratio to display means, printing means, recording medium, or another telecommunications device via a communication line.

27. An enterprise evaluation program to be executed by information processing means of an enterprise evaluation device comprising gazette acquisition means for acquiring registration gazettes from a database, number of inventions per applicant acquisition means for acquiring the number of registered inventions per unit of applicant, number of registered inventions acquisition means for acquiring the number of inventions, number-of-extinguished-inventions acquisition means for acquiring the number of extinguished inventions among the number of inventions, total number-ofeffective-patents calculation means for calculating the total number of effective patents, total effective patent remaining ratio calculation means for calculating the total effective patent remaining ratio, output means for outputting the total effective patent remaining ratio to display means or the like, and information processing means capable of controlling said gazette acquisition means, number of inventions per applicant acquisition means, number of registered inventions acquisition means, number-of-extinguished-inventions acquisition means, total number-of-effective-patents calculation means, total effective patent remaining ratio calculation means and output means.

5

10

15

20

25

wherein said information processing means achieves:

a function for causing said gazette acquisition means to acquire registration gazettes based on patent applications in a predetermined technical field filed by a specified

enterprise within a specified period from a database;

5

10

15

20

25

a function for causing said number of inventions per applicant acquisition means to acquire the number of patents subjected to, before a predetermined time, registration or number of claims of the patents as the number of registered inventions from each of said acquired registration gazettes, acquire the number of applicants described in each of said acquired gazettes, and acquire the number of registered inventions per unit of applicant through dividing said acquired number of registered inventions by the number of applicants;

a function for causing said number of registered inventions acquisition means to count said acquired number of registered inventions per unit of applicant for said all acquired gazettes and acquire the total number of registered inventions as the number of inventions;

a function for causing said number-of-extinguishedinventions acquisition means to acquire the number of
extinguished inventions of patents extinguished before the
predetermined time among said acquired number of inventions;

a function for causing said total number-of-effectivepatents calculation means to calculate the total number of effective patents by subtracting the number of extinguished inventions from said acquired number of inventions;

a function for causing said total effective patent remaining ratio calculation means to calculate the total

effective patent remaining ratio through dividing said calculated total number of effective patents by said number of inventions; and

a function for causing said output means to output said calculated total effective patent remaining ratio to display means, printing means, recording medium, or another telecommunications device via a communication line.

5

10

15

20

25

28. An enterprise evaluation program to be executed by information processing means of an enterprise evaluation device comprising gazette acquisition means for acquiring registration gazettes from a database, remaining period calculation means for calculating the remaining period, patent stock index calculation means for calculating the patent stock index, average remaining period of total effective patents calculation means for calculating the average remaining period of total effective patents, output means for outputting the average remaining period of total effective patents to display means or the like, and information processing means capable of controlling said gazette acquisition means, remaining period calculation means, patent stock index calculation means, average remaining period of total effective patents calculation means and output means,

wherein said information processing means achieves:

a function for causing said gazette acquisition means to acquire registration gazettes for patents surviving up to a

predetermined time among the patent applications filed by a specified enterprise within a specified period from a database;

a function for causing said remaining period calculation means to calculate a term expiration date of each of rights of said acquired registration gazettes, and calculate the remaining period by subtracting the predetermined time from said term expiration date;

5

10

15

20

25

a function for causing said patent stock index calculation means to calculate a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time;

a function for causing said average remaining period of total effective patents calculation means to calculate the average remaining period of total effective patents through dividing said patent stock index by the number of registration gazettes for patents surviving up to said predetermined time; and

a function for causing said output means to output said calculated average remaining period of total effective patents to display means, printing means, recording medium, or another telecommunications device via a communication line.

29. An enterprise evaluation program to be executed by information processing means of an enterprise evaluation device comprising gazette acquisition means for acquiring

registration gazettes from a database, remaining period per applicant calculation means for calculating the remaining period per unit of applicant, patent stock index calculation means for calculating the patent stock index, average remaining period of total effective patents calculation means for calculating the average remaining period of total effective patents, output means for outputting the average remaining period of total effective patents to display means or the like, and information processing means capable of controlling said gazette acquisition means, remaining period per applicant calculation means, patent stock index calculation means, average remaining period of total effective patents calculation means and output means,

10

15

wherein said information processing means achieves:

- a function for causing said gazette acquisition means to acquire registration gazettes for patents surviving up to a predetermined time among the patent applications filed by a specified enterprise within a specified period from a database;
- a function for causing said remaining period per applicant calculation means to calculate a term expiration date of each of rights of said acquired registration gazettes, calculate a remaining period by subtracting the predetermined time from said term expiration date, acquire the number of applicants described in each of said acquired gazettes, and calculate the remaining period per unit of applicant through

dividing said remaining period by the number of applicants;

a function for causing said patent stock index calculation means to calculate a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time;

5

10

15

20

25

a function for causing said average remaining period of total effective patents calculation means to calculate the average remaining period of total effective patents through dividing said patent stock index by the number of registration gazettes for patents surviving up to said predetermined time; and

a function for causing said output means to output said calculated average remaining period of total effective patents to display means, printing means, recording medium, or another telecommunications device via a communication line.

30. An enterprise evaluation program to be executed by information processing means of an enterprise evaluation device comprising gazette acquisition means for acquiring registration gazettes from a database, remaining period calculation means for calculating the remaining period, patent stock index calculation means for calculating the patent stock index, average remaining period of total effective patents calculation means for calculating the average remaining period of total effective patents, output means for outputting the average remaining period of total effective patents to display

means or the like, and information processing means capable of controlling said gazette acquisition means, remaining period calculation means, patent stock index calculation means, average remaining period of total effective patents calculation means and output means,

wherein said information processing means achieves:

5

10

15

20

25

a function for causing said gazette acquisition means to acquire registration gazettes for patents surviving up to a predetermined time among the patent applications in a predetermined technical field filed by a specified enterprise within a specified period from a database;

a function for causing said remaining period calculation means to calculate a term expiration date of each of rights of said acquired registration gazettes, and calculate the remaining period by subtracting the predetermined time from said term expiration date;

a function for causing said patent stock index calculation means to calculate a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time;

a function for causing said average remaining period of total effective patents calculation means to calculate the average remaining period of total effective patents through dividing said patent stock index by the number of registration gazettes for patents surviving up to said predetermined time; and

a function for causing said output means to output said calculated average remaining period of total effective patents to display means, printing means, recording medium, or another telecommunications device via a communication line.

5

10

15

20

25

An enterprise evaluation program to be executed by 31. information processing means of an enterprise evaluation device comprising gazette acquisition means for acquiring registration gazettes from a database, remaining period per applicant calculation means for calculating the remaining period per unit of applicant, patent stock index calculation means for calculating the patent stock index, average remaining period of total effective patents calculation means for calculating the average remaining period of total effective patents, output means for outputting the average remaining period of total effective patents to display means or the like, and information processing means capable of controlling said gazette acquisition means, remaining period per applicant calculation means, patent stock index calculation means, average remaining period of total effective patents calculation means and output means,

wherein said information processing means achieves:

a function for causing said gazette acquisition means to acquire registration gazettes for patents surviving up to a predetermined time among the patent applications in a predetermined technical field filed by a specified enterprise

within a specified period from a database;

5

10

15

20

a function for causing said remaining period per applicant calculation means to calculate a term expiration date of each of rights of said acquired registration gazettes, calculate a remaining period by subtracting the predetermined time from said term expiration date, acquire the number of applicants described in each of said acquired gazettes, and calculate the remaining period per unit of applicant through dividing said remaining period by the number of applicants;

a function for causing said patent stock index calculation means to calculate a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time;

a function for causing said average remaining period of total effective patents calculation means to calculate the average remaining period of total effective patents through dividing said patent stock index by the number of registration gazettes for patents surviving up to said predetermined time; and

a function for causing said output means to output said calculated average remaining period of total effective patents to display means, printing means, recording medium, or another telecommunications device via a communication line.

25 32. An enterprise evaluation program to be executed by information processing means of an enterprise evaluation

device comprising gazette acquisition means for acquiring registration gazettes from a database, remaining period calculation means for calculating the remaining period, patent stock index calculation means for calculating the patent stock index, average remaining period of total effective patents calculation means for calculating the average remaining period of total effective patents, output means for outputting the average remaining period of total effective patents to display means or the like, and information processing means capable of controlling said gazette acquisition means, remaining period calculation means, patent stock index calculation means, average remaining period of total effective patents calculation means and output means,

5

10

25

- a function for causing said gazette acquisition means to acquire registration gazettes for patents surviving up to a predetermined time among the patent applications filed by a specified enterprise within a specified period from a database;
- a function for causing said remaining period calculation means to calculate a term expiration date of each of rights of said acquired registration gazettes, and calculate the remaining period by subtracting the predetermined time from said term expiration date;
  - a function for causing said patent stock index calculation means to calculate a patent stock index by

counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time;

a function for causing said average remaining period of total effective patents calculation means to calculate the average remaining period of total effective patents through dividing said patent stock index by the number of registration gazettes for patents surviving up to said predetermined time and the average number of days of one year or one month; and

5

10

15

20

25

a function for causing said output means to output said calculated average remaining period of total effective patents to display means, printing means, recording medium, or another telecommunications device via a communication line.

33. An enterprise evaluation program to be executed by information processing means of an enterprise evaluation device comprising gazette acquisition means for acquiring registration gazettes from a database, remaining period per applicant calculation means for calculating the remaining period per unit of applicant, patent stock index calculation means for calculating the patent stock index, average remaining period of total effective patents calculation means for calculating the average remaining period of total effective patents to display means or the like, and information processing means capable of controlling said gazette acquisition means, remaining period

per applicant calculation means, patent stock index calculation means, average remaining period of total effective patents calculation means and output means,

wherein said information processing means achieves:

5

10

15

20

25

a function for causing said gazette acquisition means to acquire registration gazettes for patents surviving up to a predetermined time among the patent applications filed by a specified enterprise within a specified period from a database;

a function for causing said remaining period per applicant calculation means to calculate a term expiration date of each of rights of said acquired registration gazettes, calculate a remaining period by subtracting the predetermined time from said term expiration date, acquire the number of applicants described in each of said acquired gazettes, and calculate the remaining period per unit of applicant through dividing said remaining period by the number of applicants;

a function for causing said patent stock index calculation means to calculate a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time;

a function for causing said average remaining period of total effective patents calculation means to calculate the average remaining period of total effective patents through dividing said patent stock index by the number of registration gazettes for patents surviving up to said predetermined time

and the average number of days of one year or one month; and
a function for causing said output means to output said
calculated average remaining period of total effective patents
to display means, printing means, recording medium, or another
telecommunications device via a communication line.

5

10

15

20

25

34. An enterprise evaluation program to be executed by information processing means of an enterprise evaluation device comprising gazette acquisition means for acquiring registration gazettes from a database, remaining period calculation means for calculating the remaining period, patent stock index calculation means for calculating the patent stock index, average remaining period of total effective patents calculation means for calculating the average remaining period of total effective patents, output means for outputting the average remaining period of total effective patents to display means or the like, and information processing means capable of controlling said gazette acquisition means, remaining period calculation means, patent stock index calculation means, average remaining period of total effective patents calculation means and output means,

wherein said information processing means achieves:

a function for causing said gazette acquisition means to acquire registration gazettes for patents surviving up to a predetermined time among the patent applications in a predetermined technical field filed by a specified enterprise

within a specified period from a database;

5

10

15

20

25

a function for causing said remaining period calculation means to calculate a term expiration date of each of rights of said acquired registration gazettes, and calculate the remaining period by subtracting the predetermined time from said term expiration date;

a function for causing said patent stock index calculation means to calculate a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time;

a function for causing said average remaining period of total effective patents calculation means to calculate the average remaining period of total effective patents through dividing said patent stock index by the number of registration gazettes for patents surviving up to said predetermined time and the average number of days of one year or one month; and

a function for causing said output means to output said calculated average remaining period of total effective patents to display means, printing means, recording medium, or another telecommunications device via a communication line.

35. An enterprise evaluation program to be executed by information processing means of an enterprise evaluation device comprising gazette acquisition means for acquiring registration gazettes from a database, remaining period per applicant calculation means for calculating the remaining

period per unit of applicant, patent stock index calculation
means for calculating the patent stock index, average
remaining period of total effective patents calculation means
for calculating the average remaining period of total

5 effective patents, output means for outputting the average
remaining period of total effective patents to display means
or the like, and information processing means capable of
controlling said gazette acquisition means, remaining period
per applicant calculation means, patent stock index

10 calculation means, average remaining period of total effective
patents calculation means and output means,

wherein said information processing means achieves:

a function for causing said gazette acquisition means to acquire registration gazettes for patents surviving up to a predetermined time among the patent applications in a predetermined technical field filed by a specified enterprise within a specified period from a database;

15

20

25

a function for causing said remaining period per applicant calculation means to calculate a term expiration date of each of rights of said acquired registration gazettes, calculate a remaining period by subtracting the predetermined time from said term expiration date, acquire the number of applicants described in each of said acquired gazettes, and calculate the remaining period per unit of applicant through dividing said remaining period by the number of applicants;

a function for causing said patent stock index

calculation means to calculate a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time;

a function for causing said average remaining period of total effective patents calculation means to calculate the average remaining period of total effective patents through dividing said patent stock index by the number of registration gazettes for patents surviving up to said predetermined time and the average number of days of one year or one month; and

5

10

15

20

25

a function for causing said output means to output said calculated average remaining period of total effective patents to display means, printing means, recording medium, or another telecommunications device via a communication line.

36. An enterprise evaluation program to be executed by information processing means of an enterprise evaluation device comprising gazette acquisition means for acquiring registration gazettes from a database, remaining period calculation means for calculating the remaining period, patent stock index calculation means for calculating the patent stock index, output means for outputting the patent stock index to display means or the like, and information processing means capable of controlling said gazette acquisition means, remaining period calculation means, patent stock index calculation means and output means,

a function for causing said gazette acquisition means to acquire registration gazettes for patents surviving up to a predetermined time among the patent applications filed by a specified enterprise within a specified period from a database;

a function for causing said remaining period calculation means to calculate a term expiration date of each of rights of said acquired registration gazettes, and calculate the remaining period by subtracting the predetermined time from said term expiration date;

a function for causing said patent stock index calculation means to calculate a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time; and

a function for causing said output means to output said calculated patent stock index to display means, printing means, recording medium, or another telecommunications device via a communication line.

20

15

. . .

37. An enterprise evaluation program to be executed by information processing means of an enterprise evaluation device comprising gazette acquisition means for acquiring registration gazettes from a database, remaining period per applicant calculation means for calculating the remaining period per unit of applicant, patent stock index calculation

means for calculating the patent stock index, output means for outputting the patent stock index to display means or the like, and information processing means capable of controlling said gazette acquisition means, remaining period per applicant calculation means, patent stock index calculation means and output means,

wherein said information processing means achieves:

5

10

15

20

25

a function for causing said gazette acquisition means to acquire registration gazettes for patents surviving up to a predetermined time among the patent applications filed by a specified enterprise within a specified period from a database;

a function for causing said remaining period per applicant calculation means to calculate a term expiration date of each of rights of said acquired registration gazettes, calculate a remaining period by subtracting the predetermined time from said term expiration date, acquire the number of applicants described in each of said acquired gazettes, and calculate the remaining period per unit of applicant through dividing said remaining period by the number of applicants;

a function for causing said patent stock index calculation means to calculate a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time; and

a function for causing said output means to output said

calculated patent stock index to display means, printing means, recording medium, or another telecommunications device via a communication line.

38. An enterprise evaluation program to be executed by information processing means of an enterprise evaluation device comprising gazette acquisition means for acquiring registration gazettes from a database, remaining period calculation means for calculating the remaining period, patent stock index calculation means for calculating the patent stock index, output means for outputting the patent stock index to display means or the like, and information processing means capable of controlling said gazette acquisition means, remaining period calculation means, patent stock index
15 calculation means and output means,

wherein said information processing means achieves:

a function for causing said gazette acquisition means to acquire registration gazettes for patents surviving up to a predetermined time among the patent applications in a predetermined technical field filed by a specified enterprise within a specified period from a database;

20

25

a function for causing said remaining period calculation means to calculate a term expiration date of each of rights of said acquired registration gazettes, and calculate the remaining period by subtracting the predetermined time from said term expiration date;

a function for causing said patent stock index calculation means to calculate a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time; and

a function for causing said output means to output said calculated patent stock index to display means, printing means, recording medium, or another telecommunications device via a communication line.

5

39. An enterprise evaluation program to be executed by information processing means of an enterprise evaluation device comprising gazette acquisition means for acquiring registration gazettes from a database, remaining period per applicant calculation means for calculating the remaining period per unit of applicant, patent stock index calculation means for calculating the patent stock index, output means for outputting the patent stock index to display means or the like, and information processing means capable of controlling said gazette acquisition means, remaining period per applicant calculation means, patent stock index calculation means and output means,

wherein said information processing means achieves:

a function for causing said gazette acquisition means to acquire registration gazettes for patents surviving up to a predetermined time among the patent applications in a

predetermined technical field filed by a specified enterprise within a specified period from a database;

a function for causing said remaining period per applicant calculation means to calculate a term expiration date of each of rights of said acquired registration gazettes, calculate a remaining period by subtracting the predetermined time from said term expiration date, acquire the number of applicants described in each of said acquired gazettes, and calculate the remaining period per unit of applicant through dividing said remaining period by the number of applicants;

a function for causing said patent stock index calculation means to calculate a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time; and

a function for causing said output means to output said calculated patent stock index to display means, printing means, recording medium, or another telecommunications device via a communication line.

20

25

wherein said information processing means achieves:

a function for causing said gazette acquisition means to acquire registration gazettes for patents surviving up to a predetermined time among the patent applications filed by a specified enterprise within a specified period from a database;

a function for causing said remaining period calculation means to calculate a term expiration date of each of rights of said acquired registration gazettes, and calculate the remaining period by subtracting the predetermined time from said term expiration date;

a function for causing said patent stock index calculation means to calculate a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time, and dividing the same by the average number of days of one year or one month; and

a function for causing said output means to output said calculated patent stock index to display means, printing means, recording medium, or another telecommunications device via a communication line.

41. An enterprise evaluation program to be executed by information processing means of an enterprise evaluation device comprising gazette acquisition means for acquiring registration gazettes from a database, remaining period per applicant calculation means for calculating the remaining period per unit of applicant, patent stock index calculation means for calculating the patent stock index, output means for outputting the patent stock index to display means or the like, and information processing means capable of controlling said gazette acquisition means, remaining period per applicant calculation means, patent stock index calculation means and output means,

5

10

15

- a function for causing said gazette acquisition means to acquire registration gazettes for patents surviving up to a predetermined time among the patent applications filed by a specified enterprise within a specified period from a database;
- a function for causing said remaining period per applicant calculation means to calculate a term expiration date of each of rights of said acquired registration gazettes, calculate a remaining period by subtracting the predetermined time from said term expiration date, acquire the number of applicants described in each of said acquired gazettes, and calculate the remaining period per unit of applicant through

dividing said remaining period by the number of applicants;

6

5

10

15

20

25

a function for causing said patent stock index calculation means to calculate a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time and dividing the same by the average number of days of one year or one month; and

a function for causing said output means to output said calculated patent stock index to display means, printing means, recording medium, or another telecommunications device via a communication line.

42. An enterprise evaluation program to be executed by information processing means of an enterprise evaluation device comprising gazette acquisition means for acquiring registration gazettes from a database, remaining period calculation means for calculating the remaining period, patent stock index calculation means for calculating the patent stock index, output means for outputting the patent stock index to display means or the like, and information processing means capable of controlling said gazette acquisition means, remaining period calculation means, patent stock index calculation means and output means,

wherein said information processing means achieves:

a function for causing said gazette acquisition means to acquire registration gazettes for patents surviving up to a

predetermined time among the patent applications in a predetermined technical field filed by a specified enterprise within a specified period from a database;

- a function for causing said remaining period calculation

  5 means to calculate a term expiration date of each of rights of said acquired registration gazettes, and calculate the remaining period by subtracting the predetermined time from said term expiration date;
- a function for causing said patent stock index

  10 calculation means to calculate a patent stock index by

  counting said calculated remaining period for all registration

  gazettes for patents surviving up to the predetermined time

  and dividing the same by the average number of days of one

  year or one month; and
- a function for causing said output means to output said calculated patent stock index to display means, printing means, recording medium, or another telecommunications device via a communication line.
- 20 43. An enterprise evaluation program to be executed by information processing means of an enterprise evaluation device comprising gazette acquisition means for acquiring registration gazettes from a database, remaining period per applicant calculation means for calculating the remaining
  25 period per unit of applicant, patent stock index calculation means for calculating the patent stock index, output means for

outputting the patent stock index to display means or the like, and information processing means capable of controlling said gazette acquisition means, remaining period per applicant calculation means, patent stock index calculation means and output means,

wherein said information processing means achieves:

5

10

15

20

25

a function for causing said gazette acquisition means to acquire registration gazettes for patents surviving up to a predetermined time among the patent applications in a predetermined technical field filed by a specified enterprise within a specified period from a database;

a function for causing said remaining period per applicant calculation means to calculate a term expiration date of each of rights of said acquired registration gazettes, calculate a remaining period by subtracting the predetermined time from said term expiration date, acquire the number of applicants described in each of said acquired gazettes, and calculate the remaining period per unit of applicant through dividing said remaining period by the number of applicants;

a function for causing said patent stock index calculation means to calculate a patent stock index by counting said calculated remaining period for all registration gazettes for patents surviving up to the predetermined time and dividing the same by the average number of days of one year or one month; and

a function for causing said output means to output said

calculated patent stock index to display means, printing means, recording medium, or another telecommunications device via a communication line.

· ·

10

15

20

25

5 44. The enterprise evaluation program according to any one of claims 24 to 43,

wherein said registration gazettes are gazettes including publications of patent registrations, publications of examined patent applications, publications of examined utility model applications or publications of utility model registrations; and

wherein, when the registered gazettes are utility model gazettes, said patent application refers to a utility model application, and the patent subjected to registration refers to a utility model subjected to registration.

45. An enterprise evaluation program to be executed by information processing means of an enterprise evaluation device comprising gazette acquisition means for acquiring registration gazettes from a database, number-of-inventions acquisition means for acquiring the number of inventions from registration gazettes, number-of-extinguished-inventions acquisition means for acquiring the number of extinguished inventions among the number of inventions, total number-of-effective-patents calculation means for calculating the total number of effective patents, display data generation means for

generating display data, output means for outputting the display data to display means or the like, and information processing means capable of acquiring the patent stock index and controlling said gazette acquisition means, number-of-inventions acquisition means, number-of-extinguished-inventions acquisition means, total number-of-effective-patents calculation means, display data generation means and output means,

5

15

20

25

- a function for acquiring the patent stock index according to any one of claims 36 to 43;
  - a function for causing said gazette acquisition means to acquire registration gazettes based on patent applications filed by a specified enterprise within a specified period from a database;
  - a function for causing said number-of-inventions

    acquisition means to acquire the number of patents subjected

    to, before a predetermined time, registration or number of

    claims of the patents as the number of inventions from said

    acquired registration gazettes;
  - a function for causing said number-of-extinguishedinventions acquisition means to acquire the number of
    extinguished inventions of patents extinguished before the
    predetermined time among said acquired number of inventions;
  - a function for causing said total number-of-effectivepatents calculation means to calculate the total number of

effective patents by subtracting the number of extinguished inventions from said acquired number of inventions;

a function for causing said display data generation means to generate display data for associating said total number of effective patents and the patent stock index for display; and

a function for causing said output means to output said display data to display means, printing means, recording medium, or another telecommunications device via a communication line.

10

15

20

5

46. An enterprise evaluation program to be executed by information processing means of an enterprise evaluation device comprising management-finance information acquisition means for acquiring a sales volume from a management-finance database, display data generation means for generating display data, output means for outputting the display data to display means or the like, and information processing means capable of acquiring the patent stock index and controlling said management-finance information acquisition means, display data generation means and output means,

- a function for acquiring the patent stock index according to any one of claims 36 to 43;
- a function for causing said management-finance

  25 information acquisition means to acquire a sales volume of a specified enterprise during a predetermined time from a

management-finance database recording management-finance
information of an enterprise;

- a function for causing said display data generation means to generate display data for associating said sales volume and the patent stock index for display; and
- a function for causing said output means to output said display data to display means, printing means, recording medium, or another telecommunications device via a communication line.

5
